

Using The Copy Stand

This copy stand is available for student use. It is a great way to photograph flat art work, or as a tool in stop animation. Here is how to use it:

- 1) Attach your camera to the screw at the top of the stand, adjust height of camera using the crank on right.
- 2) Turn on the lights - there are several switches, which you may need to toggle on:

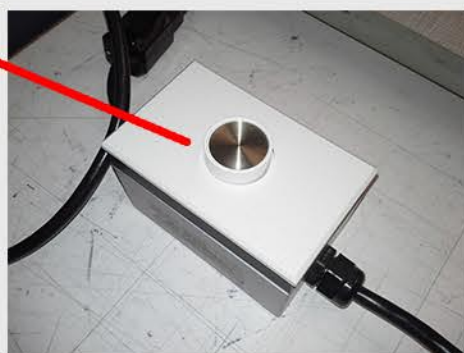

- A) Switches on the top of the light shades

- B) Switch on the lighting control box

- C) Dimmers

- 3) Adjust the lights using the dimmer switches so that your work is lit evenly and you don't see any washed out or dark areas - the brightest lighting is not always the most even lighting.

REMEMBER TO TURN THE LIGHTS OFF WHEN YOU LEAVE!

Please use caution! The lights can get **VERY** hot.
